ALFA ARC

Agile Light Flexible Advanced (ALFA) Architecture, along with energy-absorbing body structure, accounts for the absolute safety of the passengers.

Ultra High Strength Steel Point

- 3X strength in comparison to regular steel
- Energy absorbing body structure to prevent the passenger cabin from deformation.

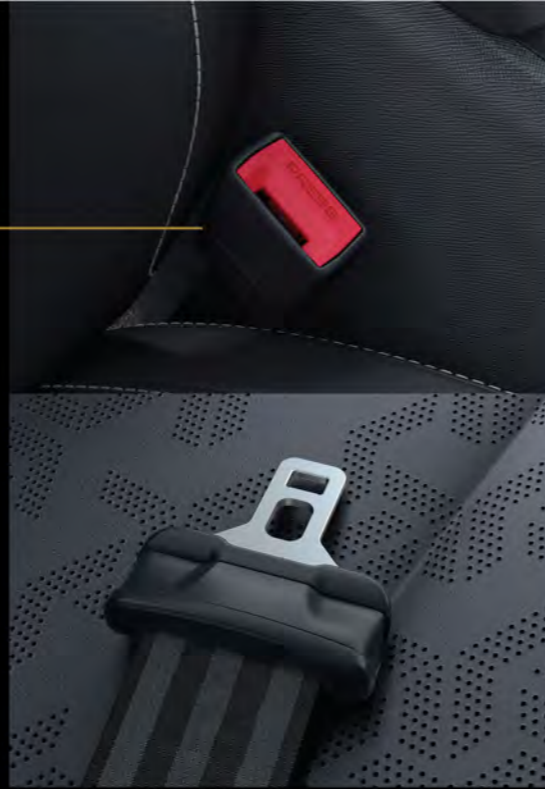

Crash Locking Tongue on Seat Belt

- Crash locking tongue prevents belt from slipping out of place
- A steady belt ensures restricted movement, hence reducing chest injuries in the event of a frontal crash

ISOFIX Anchorage for Child Seats

Keep your little ones safe with an easy installation system for child seats to make every drive blissful and relaxed.

A Crash Safety Rating is not dependent on the number of airbags

- Crash safety ratings cannot be achieved by simply adding more airbags. The basic car structure must be strong enough to ensure the safety of its passengers.
- A weak structure will get a low rating even with airbags.
- An intact passenger cabin ensures high degree of safety.

Interior Intact – 5 Star Safety

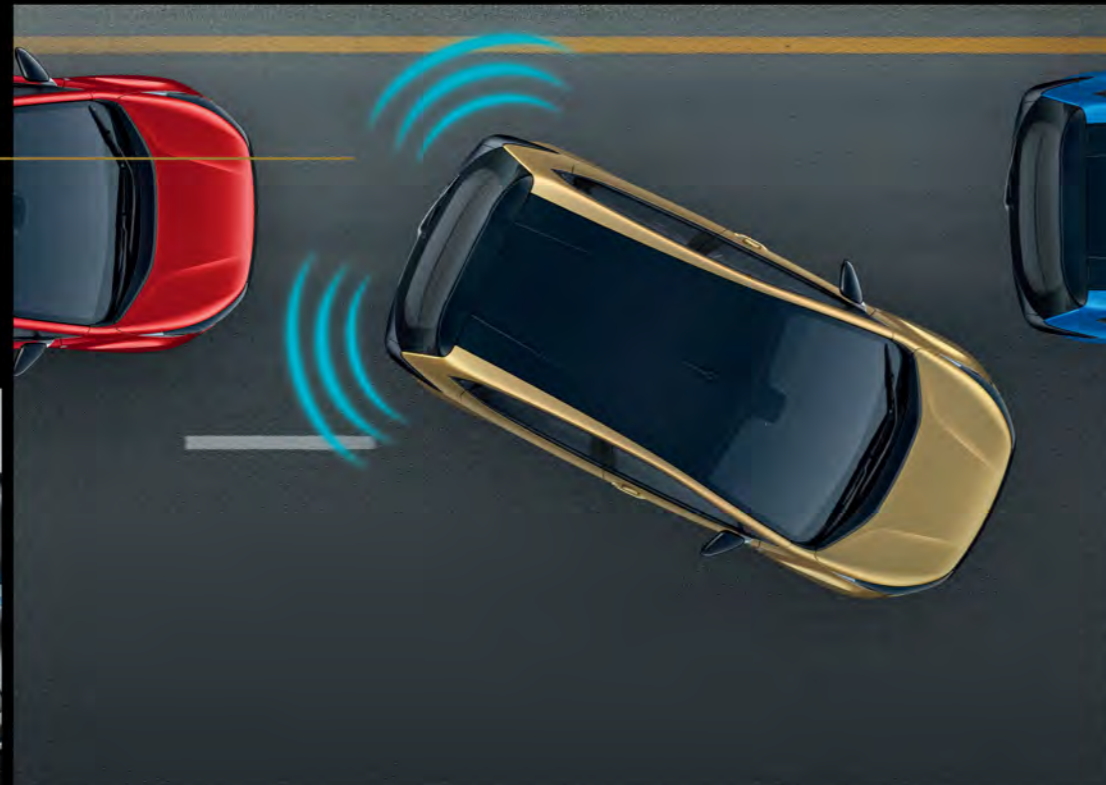

- Passenger cabin remains intact
- No major deformation on A-pillar, B-pillar or floor
- Humanoid dummy not thrown out of seats
- Doors could be opened after crash
